- HART® Protocol
- Universally programmable for
 - RTDs
 - Thermocouples
 - Resistance-sensor
 - mV-sensor
- Output linear to temperature with input signal from RTDs and thermocouples
- Custom specific linearisation with max. 30 points for sensors with Ω - or mV-output
- Analogue output 4 ... 20 mA, invertable, 2 wire design
- Signalling individually configurable for possible errors of the sensor system
- Ex class protection, intrinsically safe
 - II 1 G EEx ia IIB/IIC T4/T5/T6
 - II 2 G EEx ib IIB/IIC T4/T5/T6
- EMC Conformity per
 - DIN EN 50 081-1
 - DIN EN 50 082-2
 - NAMUR NE 21
- Isolation voltage 1500 VAC between sensor and current loop
- Configurable via
 - HART® Communicator
 - PC, Windows-programme
- CE-Conformity

**Important features of the T32-HART® transmitter range**

The digital temperature transmitter T32 range is designed for universal use in the process industry.

Comprehensive individual configuration possibilities like, for example, type of sensor, measuring range and error signalling, high accuracy, galvanic isolation and excellent EMI protection characterize these transmitters. The rail mounting case fits to any standard rail per DIN EN 50 022-35.

During configuration, by means of a HART® Communicator model 275 or a FSK modem (eg VIATOR) via the RS 232-C of a standard DOS PC, any one of 15 types of sensors can be selected. Measured temperatures are from -270 °C up to 1820 °C.

The transmitters are delivered with a basic configuration (see order information). Alternatively, upon request, transmitters can be delivered with a customized configuration within the given limits.

The following sensors can be connected:

- RTDs per DIN IEC 751, JIS C 1606, DIN 43 760 in 2-, 3- and 4-lead connection, the connection-system used is configurable and ensures an optimal lead wire compensation
- thermocouples per DIN IEC 584 resp. DIN 43 710 Cold junction compensation (CJC) is built-in, the use of an external CJC is selectable via configuration.
- resistance-sensors up to 5000 Ω in 2-, 3- and 4-lead connection, configurable compensation of the connection cable
- mV-sensors up to 1200 mV

The Configuration-Set contains

- Configuration Software (3,5" disk, Online Help)
- HART® adapter (modem)
- plug adapter (9-pin/25-pin plug)

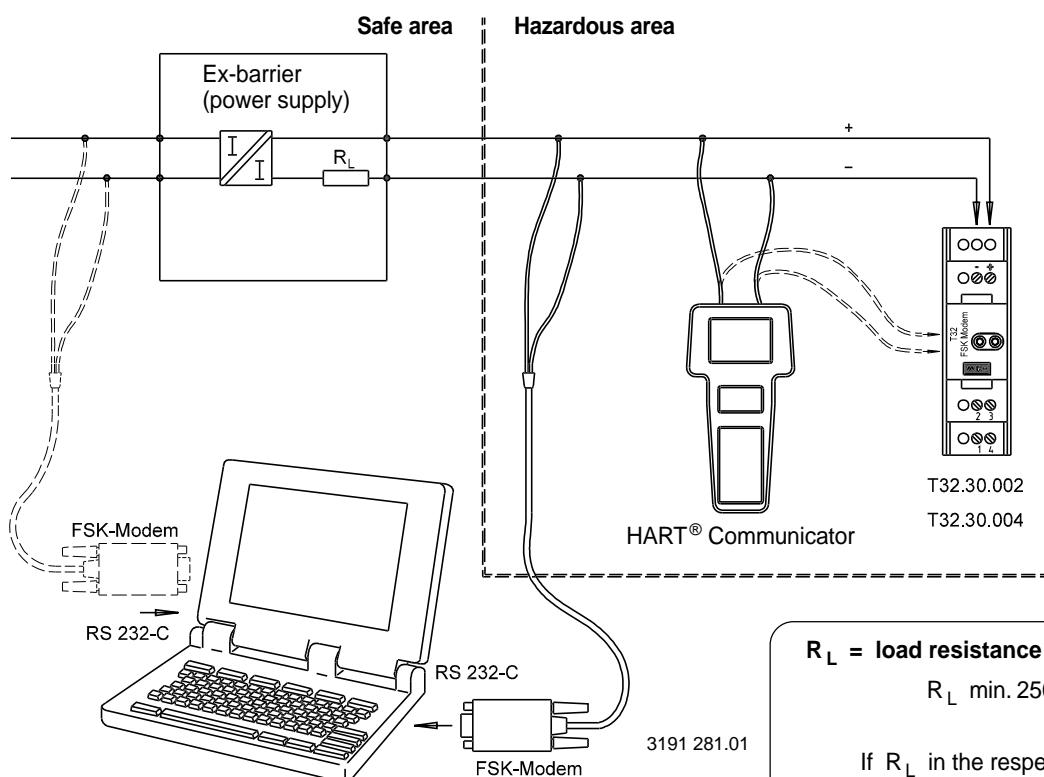

Designation of terminal connectors

Wiring scheme

Following must be observed, particularly with applications in hazardous area:

- the wiring scheme
- The total of all output values of all simultaneously connected instruments (Ex-barrier, FSK modem, HART® Communicator) must not exceed the permissible maximum values of the T32.

R_L = load resistance for HART® Communication

R_L min. 250 Ω, max. 1100 Ω

If R_L in the respective circuit is < 250 Ω,
R_L must be increased to min. 250 Ω
by connecting external resistors.

Ordering information

Order code per price list

Basic configuration: Input signal: Pt 100 in 3-lead connection, Measuring range: 0 ... 150 °C,
Output signal: 4 ... 20 mA, Output limits: NAMUR (lower limit: 3.8 mA upper limit: 20.5 mA),
Signalling of sensor error: NAMUR down scale (< 3.6 mA), Damping: 1 s

Use the sheet "customer's specification" of the price list, when ordering temperature transmitter configured to customer specification.
Parameters which are not given will be set corresponding to the basic configuration.

Specifications and dimensions given in this leaflet are correct at the time of printing.
Modifications may take place and materials specified may be replaced by others without prior notice.
