EE30EX

HUMIDITY/TEMPERATURE TRANSMITTER FOR INTRINSICALLY SAFE APPLICATIONS

Series EE30EX Transmitters from E + E Elektronik are designed for the accurate measurement of humidity and temperature in the range between 0..100 %rH and -40 ..+180 degC in possibly explosive atmospheres.

The main features of this transmitter series are humidity and temperature measurement of the highest accuracy, based on the E + E high quality capacitive humidity sensor with excellent long term stability and the manufacturers many years of experience in humidity measurement. The transmitter has an EU approved ATEX 100a registration.

The transmitters conform to the basic health and safety standards of intrinsically safe machinery according to the indicator "EEx ia" subject to EN50014:1997, EN50020:1994 and EN50284:1998.

The development of the transmitter was based on the harmonised ATEX instructions, the EC type examinations were carried out by the national institute for science and technology the German Physikalisch-Technische Bundesanstalt (PTB) .

In compliance with ATEX instructions a named authority was involved in production control.

Series EE30EX transmitters consist of the

EE30EX supply and evaluation unit classified according to [EEx ia] IIC subject to EC-type examination protocol PTB 99 ATX 2042.

And the

Sensor unit comprises the EE30EX sensor driver device and the H/T sensor probe, classified according EEx ia IIC T6 subject to EC-type examination protocol PTB 99 ATX 2043 X

Series EE30EX transmitters are for applications deep in Zone 0 and for temperature class T6. For example, Version C of the sensor probe can be separated with a maximum cable length of 10m to be mounted inside Zone 0 (acc. apparatus group II, category 1). The supply and evaluation device can be separated from the sensor driver device through a cable up to a max. length of 100 m .

There are three housing versions available

housing A wall mounting in explosive Zone 1 or 2

housing B separated sensor head (up to 10 m) for installation directly in the zone wall

housing C with separated sensor head (up to 10 m) for installation deep in zone 0

08/1999 Technical data are subject to change

MAIN FEATURES

- EC-Type Examination acc. ATEX
- approved for ZONE 0
- highest accuracy up to 180 degC
- dew point, absolute humidity,... measurement
- incl. MS Windows™ Software
- Humidity sensor interchangeable

A modern microprocessor based transmitter device enables highest installation flexibility for daily use and periodical monitoring.

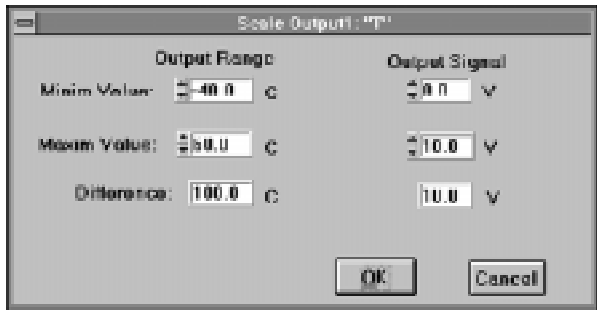

Functions, calculated out of relative humidity and temperature like dew point, absolute humidity, enthalpy,...as well as 2 free selectable and free scale analogue outputs with an additional RS232 interface (already realised and appreciated for the series SERIE E28/30), are main features of EE30EX series.

Additionally the transmitters can be supplied with a local LC-display on the housing cover. Thus the measurement readings are equivalent with the actual selected analogue values.

SOFTWARE DESCRIPTION

All EE30EX transmitters are equipped with user friendly software, running under MS WINDOWS™. Through clear and menu controlled graphics, users have the possibility of individual transmitter configuration, of monitoring and recording measurement data, and of easy service functions.

It is also possible to communicate directly with the transmitter via standard terminal software to integrate the EE30EX into free memory programmed controls. All digital data to and from the transmitter is transferred via an RS232 C serial interface.

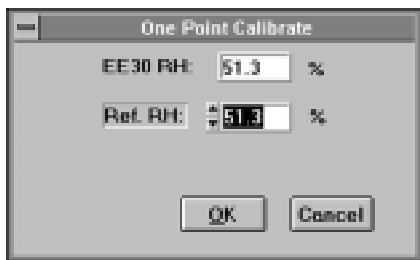

Freely selectable and scalable outputs

The User has a free choice of allocating the measuring value on the two analogue outputs. Output range and output signal are freely scalable and selectable. The measuring interval is individually adjustable.

Sensor exchange

Humidity sensors as well as temperature sensors are simply interchangeable. If a sensor element is damaged it is possible to order replacement sensors from the manufacturer. The electronic device is easily adjusted via software, through direct input of the delivered sensor data.

Expensive and time consuming transmitter returns are therefore unnecessary.

Calibration

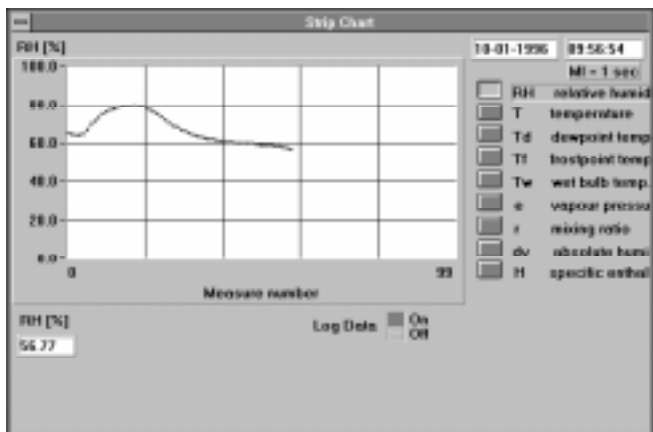

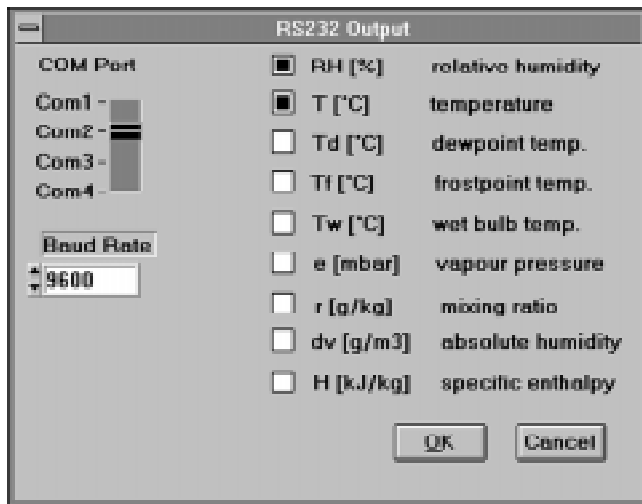

The EE30EX software provides an one-point calibration procedure for relative humidity and temperature. On request the transmitters can be easily adjusted through a simple program step. For humidity calibration we offer a reliable reference calibration set. (see accessories)

Calculated variables

Using the two measured values of relative humidity and temperature, the EE30EX is able to calculate the following additional variables.

- dew point temperature Td
- frost point temperature Tf
- wet bulb temperature Tw
- water vapour pressure e
- mixing ratio r
- absolute humidity dv
- specific enthalpy H

The calculation functions are displayd on the analogue outputs as well as on the RS 232C serial output.

Display functions for measuring value

Actual measuring values can be displayed on-line on the computer screen. The values can be described in a strip chart or in the form of a continuous output list.

Via Data-logging function measuring values can be stored in an ASCII code format on diskette or hard disk. They can be read and processed by almost all standard software programmes. (e.g. Excel, Lotus 123, Quattro Pro, etc.)

HOUSING

MODEL A

Model for wall mounting.

The sensor head is fixed mounted on the sensor driver unit.

The sensor driver unit can be installed in ZONE 1 or ZONE 2.

Working range sensor head: -20...60 degC

Working range electronic: -40...60 degC

MODEL B

Model with separated sensor head for mounting direct in the bulkhead.

The sensor driver unit can be installed in ZONE 1 or ZONE 2.

The up to 10m separated sensor head is mounted directly in the bulkhead to the next higher EX-Zone.

The mounting is done with a feedthrough which corresponds to the Ex-requirements. The feedthrough is included in the delivery.

Working range sensor head: -40...180 degC

Working range electronic: -40...60 degC

MODEL C

Model with separated sensor head for mounting deep in ZONE 0.

The sensor driver unit can be installed in ZONE 1 or ZONE 2.

The up to 10m separated sensor head is mounted direct in ZONE 0. For the feedthrough in the bulkhead, a stainless steel tube is fixed mounted on the measuring lead.

The mounting is done with a feedthrough which corresponds to the Ex-requirements. The feedthrough is included in the delivery.

Working range sensor head: -40...180 degC

Working range electronic: -40...60 degC

TECHNICAL DATA

Measurands

Relative humidity

Humidity sensor ¹⁾	Series HC	
Working range humidity ¹⁾	0...100 %RH	
Accuracy humidity incl. hysteresis and nonlinearity with calibration against certificated standards standard calibration	± 1% RH (0...90% RH) ± 2% RH (0...90% RH)	± 2% RH (90...100% RH) ± 3% RH (90...100% RH)
Temperature dependance electronic	typical 0,06 %RH/degC	
Temperature dependance sensor head	< 0,03 %RH/degC	
Response time with filter at 20 degC / t ₉₀	< 30 sec.	

Temperature

Temperature sensor	Pt 1000 (DIN EN 60751, class A)		
Working range sensor head	EE30Ex-A	-20...60 degC	-4...140 °F
	EE30Ex-B	-40...180 degC	-40...356 °F
	EE30Ex-C	-40...180 degC	-40...356 °F
Accuracy at 20 degC	± 0,1 degC		
Temperature dependence	typical 0,005 degC/degC		

Calculation functions

dew point temperature	Td	-80...100 degC (-112...212 °F)	mixing ratio	r	0...999 g/kg (0...9999 gr/lb)
frost point temperature	Tf	-80...0 degC (-112...32 °F)	absolute humidity	dv	0...700 g/m ³ (0...300 gr/ft ³)
wet bulb temperature	Tw	0...100 degC (32...212 °F)	spezific enthalpy	H	-50...2800 kJ/kg (-15000...999999 lbf/lb)
water vapour pressure	e	0...1100 mbar (0...15 psi)			
Accuracy	ref. to data sheet series EE28/30				

Outputs

Two freely selectable and scalable outputs	0 - 5 V	< 1.0 mA
0...100 %r.F. / -20 (-40) ... 60 (180)degC analogue	0 - 10 V	< 1.0 mA
	4 - 20 mA	R _L < 400 Ohm
Serial output	RS 232C	

General

Supply voltage	SELV 24 VDC/VAC ±15%	
Current consumption	≤ 150mA (24 VDC); ≤ 280mA (24 VAC)	
System requirements for communication-software	IBM compatible AT, 386/33 MHz or higher (with Coprocessor), appr. 5 MB free hard disk memory, 4 MB RAM, 3.5 "" disk drive, serial interface, mouse (recommended), MS WINDOWS 3.1 or higher	
Serial bus type for PC communications	RS 232 C	
Housings	supply- and evaluation unit	ABS-plastic/ IP65
	sensor driver unit	AlSi12 (DIN 1725)

SCHEDULE TO EC-TYPE-EXAMINATION CERTIFICATE PTB 99 ATEX 2043 X

The sensor driver electronics may only be used in hazardous areas for which, according to the requirements for equipment group II, equipment of category 2 is necessary.

The sensor in the version separated from the sensor driver electronics, with cable tail, may be installed in the portion of the area for which, according to the requirements for equipment group II, equipment of category 2 is necessary. The ambient conditions must be in compliance with the atmospheric conditions according to EN 50204 (temperature range: -20 °C to +60 °C, absolute pressure range: 0.8 bar to 1.1 bar).

The sensor in the version separated from the sensor driver electronics, with cable tail, may be used in the area for which, according to the requirements for equipment group II, equipment of category 1 is necessary, even with a maximum cable length of 10 m. The ambient conditions must be in compliance with the atmospheric conditions according to EN 50204 (temperature range: -20 °C to +60 °C, absolute pressure range: 0.8 bar to 1.1 bar).

When the sensor is installed inside the category 1 area, the sensor is to be installed such that spark and friction sparks must not be taken into consideration even in the case of faults occurring inside. The cable pertaining to the sensor is to be run inside the category 1 area so that it is protected from electrostatic charging related to explosion group IIB. The cable provides sufficient protection from electrostatic discharges related to explosion group IIB.

(18) **Essential health and safety requirements**
Met by the standards mentioned above.

Based on the high measuring accuracy the EE30EX series is suitable as reference device.

To meet the high demands regarding monitored measuring instruments, it is possible to order our series EE30EX either with specific test report according DIN EN 10204 - 2.3 as well as with an official PTB calibration certificate.

CALIBRATION SET

To check and possibly adjust the transmitter series EE30EX, we offer user friendly calibration equipment.

The calibration devices are carefully designed for specific use with the EE30EX probe, to allow accurate and reliable calibration without influence from the surrounding air.

Non saturated liquid lithium-chloride solutions serve as the standards. These are available in sets of five ampoules, which may be stored for an indefinite length of time. Humidity standards for 10/35/50/80 and 95 %rH are available.
