

The Prizm120 is a member of the Operator Interface family from Renu Electronics. It uses 128 X 64 pixels back lit graphical LCD. It is designed for applications where a number of messages and graphics are to be displayed on one screen.

- 128 X 64 pixels (3") Graphical Display
- 4 function keys with macro functions and LEDs
- Serial port for printing Screens, Alarms. Floating point
- RTC

Function Keys and LEDs

The Prizm120 has 4 powerful user definable function keys. The user can define actions for 3 events: when the key is pressed, while the key is pressed and when the key is released.

Multiple tasks can be assigned to a single keystroke making it a powerful tool in the machine control environment. It is also possible to assign actions for a combination of two keys pressed simultaneously.

The possible tasks include coil operations (such as coil on, off, toggle, hold on or hold off), register operations (such as write constant to registers, copy tags etc.), screen operations (such as go to a specific screen, go to the next defined screen, go to previous screen etc.), alarm operations (acknowledge alarm, print alarm, select next/previous alarm etc.) and so on.

Each key can have different functions depending on the active screen. This can be used effectively to navigate easily through the application. Access to function keys can be protected using a password.

Changing Data

Data entry objects can be defined in the Prizm where data is to be changed. Since every user wants different ways to edit the data, the unit provides full flexibility in cursor control and key operations during data entry. The default assignments as shown on the keypad can also be used for data entry.

A bit / coil status can also be edited in an interactive manner. The key toggles the bit status and ENT key accepts the selection. Text for the object (for example, RUN when bit is ON and STOP when bit is off) changes on the display to indicate the selected bit status making it very user friendly.

Screens

The user can define as many screens as allowed by the unit memory. A list of tasks can be defined before showing a screen, while showing a screen as well as after hiding the screen. This allows proper initialization of parameters, if needed.

Various types of objects can be placed on the screen. They include simple text objects, data display (bit type text, register data show, messages objects based on a value in the register), alarm object, error object, data entry object (bit type and register type) etc.. Moreover, the unit supports graphic objects such as rectangles, circles, lines, bitmaps etc. Objects can be grouped together and can belong to libraries.

Data display and data entry objects support various different data formats such as integer, unsigned integer, long integer, float etc. which makes it easy to use in almost any application. Data can also be displayed in a bar graph format.

Alarms

The user can define up to 256 alarms. For faster communication with the PLC, it is possible to define all the 256 alarms as consecutive bits (16 words) in the PLC. It is possible to log alarms (optional) along with the on/off times and retrieve them later. The alarm object is used to view the alarms with many flexible view options. Keys can be assigned to acknowledge alarms, print or view next / previous alarms etc.

Special Objects

Special objects such as push buttons, multi-state switches, lamps, message objects, alarm objects etc. are supported by the configuration software, making it easy to configure the unit for your application.

Specifications

Power	: + 24V DC \pm 10%, 3W maximum
Display	: 128 X 64 pixels backlit LCD
Bezel	: IP65 rated keypad
Temperature	: Operating: 0 to 50 degrees C* Storage: -25 to 80 degrees C
Humidity	: 10% to 90% (Non condensing)
Bezel Size	: 91 H X 136 W X 29 D mm
Panel cutout	: 77 H X 127 W mm

Communication	: Using programming port of PLC
Immunity to ESD	: Level 3 as per IEC1000-4-2
Immunity to Transients	: Level 3 as per IEC1000-4-4
Immunity to Radiated RF	: Level 3 as per IEC1000-4-3
Immunity to Conducted RF	: Level 3 as per IEC1000-4-6
Emissions	: EN55011 CISPR A

* Extended temperature range available. Contact factory for details.

PLC's supported

- ABB AC 31 Series
- ABB AC 70 Series
- AB Micrologix
- AB SLC 500 (DF1)
- AB SLC 500 (DH485)
- Aromat FP0 Series
- Aromat FP1
- Aromat FP3
- Aromat FP Sigma
- CEGELEC ALSPA
- Crouzet Millenium
- Delta DVP Series
- FATEK PLC
- Fuji Flex
- FATEK PLC
- Fuji Flex
- GE 90-30 / Versamax (SNP)
- GE VersaMax, RJ45
- GE VersaMax, DB9
- IDEC Micro³
- IDEC Microsmart
- Jetter nano – B
- Keyence KV Series
- Koyo DL105 / 205 / DL05
- LG-Master K Series
- LG Master K10S & 10SI PLC
- LG Master 200 S Series
- Messung XMP8 PLC Series
- Messung Nexgen 4000
- Messung Nexgen 5000
- Mitsubishi FX(8 pin con'r)
- Mitsubishi FX(25 pin con'r)
- Modbus Slave
- Modicon Quantum
- Modicon Micro
- Omron (Host Link) - 9 pin
- Omron (Host Link) - 25 pin
- Samsung SPC 10
- Samsung N70 Plus
- Siemens S7-200
- Spencer PLC
- Square D Sy/max
- Taian TP02 Series
- Telemecanique TSX-17 Series
- Telemecanique TSX-47 Series
- Telemecanique TSX-67 Series
- Toshiba - Programming Port
- Toshiba T1
- Toshiba T2
- Toshiba T Series (Link port)
- Toshiba T2 (Link port)
- Twido
- USS Protocol
- Yaskawa
- Yokogawa PLC

* Refer Prizm Keypad based products family brochure for specific cable part numbers

New PLC drivers are constantly added. Please contact factory for more information.
